

## **Reading at Night Made Easy with This Amazing LED Book Reader Light**

If you are a book lover or even just an avid reader, you will probably agree upon the fact that reading a book at night while you are tucked inside your bed is much more comfortable and fun than reading it in the day. However, reading at night comes with its own set of problems. The most major one of which is the fact that if you share a room with a sibling or partner, they might not want you to turn on the lights and read because that would disturb their sleep. Understanding this problem, we have for you an amazing [LED Book Reader Light](#) that will not only solve this problem but also enhance your night reading experience.

Built to provide you with the best reading experience, this LED book reader is basically a thin thermoplastic polymer slate with LED lights embedded onto its side, so the moment you want to read in the dark, you can just simply turn this LED book reader on and keep it onto your page, it will light up the whole page perfectly without spreading any lights in your surroundings.

The LEDs inside this book reader are powered by AAA batteries, and their brightness can be easily adjusted by rotating the ON/OFF dial. Talking about its size, the LED book reader measures 6.7\*5.7\*0.5in and can be easily carried while also being perfect for pages of all sizes, thus making this the ideal gadget for every book reader out there.
