KEYMACRO is a powerful encryption application that is able to encrypt and decrypt data automatically. The program automatically encrypts data without requiring a passkey. The program utilizes 3 algorithms to encrypt your data (AES, Blowfish and Twofish), offering a diverse data security level. All of your data is securely encrypted and there is no need to provide a passkey. You can also easily turn off the encryption if needed. This program is very easy to use, and a novice user can encrypt an unlimited amount of data. All you have to do is start the program, set the directory that you want to encrypt, and it will do it automatically. Toggle encryption off if needed: You can enable or disable automatic data encryption using the program's Options button. Backup data: You can easily copy and backup encrypted data, and you can also import the data from a file or folder. Encrypt/decrypt folders: You can encrypt entire folders, and you can decrypt specific folders if you need to. Choose the keys: You can choose the type of data to encrypt and the number of keys to use. Perform backups: You can safely backup encrypted data. Additional features: The program is able to perform different functions, such as creating self-updating keyfiles. Amazingly, this free Windows 8.1 app will help you to protect your computer against spyware and malware. It is called Securosis Free and was developed by Advanced Windows Secure. It is a self-updating app that does not require installation and is simple to use. It is a completely free and full-featured security and privacy app for Windows 8 and 8.1. It does not replace antivirus software, but rather it is an add-on to it. Also, its developers are here if you need any help. You can read the help center for more details. Additional features: Detects and removes malware, viruses, and spyware. Helps protect your privacy. Windows 8.1 version. No need to have an Internet connection to update your app. Real-time protection. Free antivirus. Notification center. No in-app purchases. Best in class settings manager. 6. ZoneAlarm for Windows 8.1 If you have been searching for a good antivirus solution to protect your computer, look no further. ZoneAlarm is a popular security and privacy tool that can be used 70238732e0

KEYMACRO is a universal utility that allows you to create a password database in your system that will be protected with your private key. When a computer is turned on, KeyMACRO will search the key in the private key database to find if a matching password is stored in it. If this is the case, the computer will automatically activate the file that was previously protected by the matching password. If the computer does not find a password in the private key database, the program will ask you to enter a password and enter it into the database so that it can be used in the future to protect files in the future. What can it do? 1. Protect programs, folders, and individual files. 2. Protect confidential files. 3. Protect password databases. 4. Protect websites and online content. 5. Add a password to a new file or change the password for an existing one. 6. Perform a complete scan of a file or directory for passwords, including files and subdirectories. 7. Protect a system from unauthorized access. 8. Delete all passwords from the system. 9. Change the default passwords and remove the old passwords. 10. Provide alternate passwords and have a choice of options. 11. Protect the operating system from unauthorized use. 12. Protect the operating system when booting. 13. Protect the operating system with a combination of characters. 14. Protect the operating system with a combination of characters that are a part of the OS name. 15. Generate a password. 16. Generate a new password for a known password. 17. Generate a new password for a known password with a given length. 18. Restore the password of a file or directory. 19. Restore

---

the password of a file or directory with a given length. 20. Convert a file password from Hex to Base64. 21. Convert a file password from Base64 to Hex. 22. Randomly generate a password. 23. Randomly generate a password with a given length. 24. Convert a password from Hex to Base64 and from Base64 to Hex. 25. Add random characters to a password. 26. Modify a password by adding, deleting, or replacing characters. 27. Find matching passwords for an existing password. 28. Find matching passwords for an existing password with a given length. 29. Generate and display an encrypted password. 30. Generate and display an encrypted
